

E10-Enhancing e-skills at school: a shared "dictionary" of tools and practices

1 Week ERASMUS+ Teacher Training Course PIN 908748187

In collaboration with FONDAZIONE GOLINELLI: <http://www.fondazionegolinelli.com/>

Training course aimed at accompanying teachers towards a greater awareness of the need to integrate the teacher's educational toolkit with innovative strategies and digital tools.

We will develop the idea of bringing digital strategies into the teacher's daily practice in a transparent way, using tools working alongside those of traditional teaching, progressively accompanying them and then partly implementing them.

Once acquired, technology empowers and enhances learning approaches and strategies focusing on the active role of the student in the learning process. Participants are requested to bring a laptop and also a personal mobile device (tablet or smartphone).

Date&time	Arguments
Mo. 9.30-12.30	General introduction: Internet and web apps. The role and the sense of web technologies in teacher's daily routine. Getting acquainted: meeting each other and sharing experiences about the role of digital devices and practices in their work and countries. Examples of interactive and free digital platforms as a main tool to develop teachers' activities in a digital(ized) world. Google Suite as a set of generalist tools every school can use for free. How to access the Suite. Contact us for more details.

This course is organized in collaboration with: **[THE GOLINELLI FOUNDATION](#)**

Fondazione Golinelli was established in Bologna in 1988, as a will of the entrepreneur and philanthropist Marino Golinelli.

Today it represents the unique Italian example of a private and totally operative foundation, inspired to the model of the American philanthropic foundations. Fondazione Golinelli deals with education, training and culture in an integrated manner, to nurture the intellectual and ethical growth of young people and society, with the final goal of contributing to the sustainable development of the country.

It works for cultural and responsible development of the citizens in all fields of knowledge. One of the most important strategic goals is to provide children (especially schoolchildren), the citizens of tomorrow, guidelines and tools that enable them to grow responsibly, civilly and socially, fostering the creation of ethical behavior for a more cohesive society. Young people, able to develop themselves in an innovative and competitive way in an increasingly globalized, complex, multi-cultural and unpredictable world.
